

TO SUPPLY LEFTOVER FOOD TO POOR

Introduction:

Salesforce is a leading cloud-based Customer Relationship Management (CRM) platform that provides versatile tools for managing and optimizing customer relationships, sales processes, and customer service. For this project, aimed at helping supply leftover food to the poor, Salesforce serves as a comprehensive solution that can streamline processes and improve the efficiency of this charitable mission. This chapter will discuss Salesforce's core functions and how they support the goals of the project.

Project Overview:

The Food Distribution Project in Salesforce is designed to streamline the process of collecting and distributing leftover food to those in need. The project uses Salesforce objects and automation tools to manage venues (where food is collected), drop-off points (where food is distributed), tasks (for managing food pickup and delivery), volunteers, and execution details for each distribution event. Key objects in the System include Venue, Drop-Off Point, Task, Volunteer, and Execution Details. Each object captures essential data, such as venue locations, volunteer assignments, and food distribution statistics, enabling efficient tracking and coordination of the distribution process.

Overview of salesforce:

Salesforce offers a wide array of functionalities that allow organizations to manage interactions and relationships with various stakeholders, including clients, volunteers, and donors. Key modules in Salesforce include:

- **Sales Cloud:** Enhances sales process efficiency through lead tracking and management tools, ensuring effective outreach and engagement.
- **Service Cloud:** Focuses on customer service, providing tools for case management and knowledge sharing that could support the logistics of food distribution.
- **Marketing Cloud:** Automates communication and engagement, including email campaigns and analytics, helping non-profits reach out to donors and partners efficiently.

Key features supporting the project:

For the “Supply Leftover Food to the Poor” project, Salesforce can enhance operations through:

- **Data Management:** Centralized storage of donor information, distribution points, and logistical data.
- **Real-Time Reporting and Analytics:** Allows for monitoring food supply levels, analysing distribution metrics, and generating reports to improve efficiency.
- **Mobile Accessibility:** Ensures volunteers and team members can update and access information on the go, a crucial feature for field operations in food distribution.

Goals:

- ❖ **Streamline Food Collection** – Enable donors to easily register and donate leftover food.
- ❖ **Centralize Data Management** – Use Salesforce to store and manage donor, volunteer, and recipient data.
- ❖ **Optimize Logistics** – Automate routes and volunteer assignments for efficient food delivery.
- ❖ **Track and Report** – Monitor donation flows and generate reports to improve operations.
- ❖ **Enhance Communication** – Keep donors and volunteers informed through updates and alerts.
- ❖ **Ensure Food Safety** – Maintain quality standards and train volunteers in food handling.
- ❖ **Plan for Expansion** – Build a scalable system to support future growth in different regions.
- ❖ **Raise Awareness** – Use marketing tools to engage the community and attract more support.

Detailed Description of Implemented Features:

Creating Developer Account :

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details:

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Sign up for your Salesforce Developer Edition

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

First Name*

Last Name*

Email*

Role*

Company*

1. **First name & Last name :**
2. **Email :**
3. **Role :** Developer
4. **Company :** College or Company Name
5. **Country :** India
6. **Postal Code :** pin code
7. **Username :** should be a combination of your name and company

Account Activation :

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

Create Venue Object :

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
 - Enter the label name >> Venue
 - Plural label name >> Venues
 - Enter Record Name Label and Format
 - Record Name >> Venue Name
 - Data Type >> Text
2. Click on Allow reports and Track Field History, Allow Activities.
3. Allow search >> Save.

Create Drop-Off Point Object :

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
 - Enter the label name >> Drop-Off Point
 - Plural label name >> Drop-Off Points
 - Enter Record Name Label and Format
 - Record Name >> Drop-Off point Name
 - Data Type >> Text
2. Click on Allow reports and Track Field History, Allow Activities
3. Allow search >> Save.

Create Task Object :

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
 - Enter the label name>> Task
 - Plural label name>> Tasks
 - Enter Record Name Label and Format
 - Record Name >> Task Name
 - Data Type >> Text
2. Click on Allow reports and Track Field History,Allow Activities
3. Allow search >> Save.

Creating a Custom Tab :

To create a Tab:(Venue)

1. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)

SETUP
Tabs

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.

Action	Label	Tab Style	Description
Edit Del	Drop-Off Points	Trophy	
Edit Del	Execution Details	Car	
Edit Del	Tasks	Airplane	
Edit Del	Venues	Globe	
Edit Del	Volunteers	Presenter	

Web Tabs

No Web Tabs have been defined

2. Select Object(Venue) >> Select the tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save
